

De Leon Melendez, Jesus Manuel
Manager: Watson, James E - Sr Mgr-Radio Frequency

2023 Performance Goals

Sr Engr Cslt-Radio Frequency

Best Cost

1. Best Cost
 - a. Pipeline/Pool review with the region(s) as a part of monthly reporting.
 - b. Work with Finance on UNEFI budget code changes initiated by the traffic team (i.e. not a request from the region).
 - c. Support the Transformation Office Savings (TSO) Initiatives
2. 1ERP Cutover and post launch support
 - a. Cutover from Peoplesoft to 1ERP in Feb 2023.
 - b. Ensure alignment and clear communication with the finance team (especially when we make changes to Primary Rationale, which change the budget codes)
 - c. Become familiar with 1ERP (high level is sufficient)

Best Culture

1. Mentoring and/or teaching others. Once a quarter to provide a team training (can be on team call or separate call) on a topic to help educate or inform others. Can be a traffic related topic, about a tool (how to better use Tableau for example), or another work related topic.
2. Improve work processes. Find creative ways to improve current work processes.
3. Communications
 - a. Participate in a weekly or bi-weekly meeting with the region(s) you support.
 - b. Once a month review of reporting from BEST NETWORK item 1.
4. Complete any mandatory training on time
5. Encourage and provide opportunity to achieve Volunteering Target – 4 Hours Per Employee
6. Recognize Employees
7. Drive a curious learning and collaborative culture
8. Pulse Surveys – Participate, develop and implement action plans based on survey responses
9. People: Develop the next generation of technology leaders for our business
10. Encourage and support team to participate in online and virtual training throughout the year

Best Network

1. Consistent monthly reporting/feedback to the regions on priorities.

- a. Include SP/RF directors
- b. Review of alignment of POR/BPY dates to KITT goals
- c. Constant reinforcement of status and BPY/PORY definitions, and the need to keep all dates constantly maintained
- d. Produce a monthly report of items #2 and #3 below and send it to the region(s) via email and copy ED and Directors, RF Manager(s) and any regional traffic engineer. Save copy on Traffic shared drive.

2. Monitor changes to network traffic and report out on it (requires executive, territory, and market-level reports as well as detail level results for the submarkets to use and take action on; target end of 1Q to begin sharing reports, 2Q for the more difficult reports:

- a. Trigger 4G and 5G (actionable part of monthly report 1)
 - 1. Which LTE markets are > 15% Sub 1 triggers and how many solutions are needed for that market? - Monthly Process
 - 2. Provide a list of prioritized sectors for solutions to be created?
- b. High Runners (> 500% and LTE market is under 15%)
 - 1. Which markets are under the 15% target and still have sectors with > 500% CU. Provide a list of sectors to region.
- c. C-Band
 - 1. Offload
 - 2. Total Data Volume by PEA
 - 3. % of total PEA data traffic - 4G, NW, C-Band, mmWave
 - 4. Analysis of per site information - C-Band as a % of total site traffic, trigger relief on congested sites, data volume increases tied to congestion relief (as best as we can see)
 - 5. UEs per sector or site, max UEs, unique UEs
 - 6. Throughput analysis
- d. mmWave
 - 1. Offload
 - 2. Analyze need for 4G/5G combo sites
- e. 5G versus 4G Analysis
 - 1. Traffic stats designed to highlight the trends and shifts of 4G traffic to 5G NW and 5G mmWave
 - 2. Trigger relief as a result of 5G adoption/usage
 - 3. Data volume trends as a result of relieving congestion
- f. QCI8 and QCI9 Traffic Studies
 - 1. Monitor changes, especially when price plans change

- g. Busy Hour
 - h. FWA (includes OFS, LTE Home, 5G home)
 - 1. User and sector information on 4G FWA
 - a. Usage / node or site, usage / customer, time of day usage stats, % of sector/site DV consumed by fixed products, number of fixed users per sectors/nodes, throughput trends
 - 2. User and sector information on 5G FWA
 - a. Same as above but also broken down by 5g technology (NW, C-Band, mmw)
 - i. EOS POR dashboard
 - j. Fixed (FWA) vs mobility (TBD - when ability to split/differentiate is available)
 - 1. split of Fixed vs Mobility by c-band, mmWave, LTE.
 - k. Clean NR and second FDD and impact to triggers (will have to develop a dashboard) on specific sectors as they are changed to Clean NR or converted to Second FDD. TBD
 - l. NSA vs SA capacity?? TBD
3. Continue to drive and support the territory teams through the project management of assigned key programs and core teams.
- a. Special projects include: C-Band, mmWave, SNAP, ROOT, RBB, SGFI, STL, and more
 - b. C-band - Continue to drive and support the C-band program. Work with field teams to prioritize sites for maximum POPs count to drive toward 200M POPs covered by end 1Q23.
 - c. mmWave expansion - 3.5k new sites
 - d. Readout on your projects regularly to keep the team up to speed; request to join RF or Engineering director calls as needed to share updates
4. Network Planning
- a. 3 year Plan - support Vision and submarket pipelines
 - b. Assist with the development of the 2024 plan
5. Ensure new sites are being deployed in the right areas and are solving the issue they were intended to solve (SGFI, Capacity, etc). When the Actual offload tool is working to include output in monthly report for activations during reported period..
6. Traffic Studies and Nationwide Roadshow
- a. In April/May, Traffic prepared a custom presentation for each Market/Submarket as part of the nationwide submarket review "roadshows"

Best Network Performance & Reliability: Continue to dominate 4G & 5G performance

- Drive performance improvements to reclaim Root Overall Performance and Reliability wins.
- Continue to support c-band deployment to improve 4G capacity and overall network performance.
- Provide visibility to congested sectors to address most congested sectors as highest priority.
- Develop plan to maintain UL performance.
- Provide performance support to the field teams.

Metric Target

- Root Metrics Metro Drives (85%)
- Root Metrics State Drives (70%)
- VoLTE IAs (0.60%)
- VoLTE SIP DCs (0.60%)
- VoLTE SEER (99%)
- VoLTE RTP Gap Duration (0.13%)
- LTE RRC Setup Failure (0.25%)
- LTE Bearer Drop (0.50%)
- 4G Sub1 Triggers (700/850) (15%)
- 4G Sub3 Triggers (AWS/PCS) (5%)
- 5G C-band Setup Failures (0.50%)
- 5G C-band Dropped Connections (5%)
- 5G C-band Throughput (200 Mbps)
- 5G Sub1 Triggers (850) (TBD)
- 5G mmW Setup Failures (1%)
- 5G mmW Dropped Connections (15%)
- 5G mmW Throughput (600 Mbps)
- 5G NW Setup Failures (1%)
- 5G NW Dropped Connections (10%)
- 5G SA Setup Failures (0.50%)
- 5G SA Dropped Connections (1%)
- SA to NSA Transitions (5%)

VoLTE EPS FB Failure Rate (0.25%)

LTE Home Dropped Connections (1%)

LTE Home Setup Failures (1%)

LTE Home DL Throughput (75%)

LTE Home UL Throughput (75%)

5G mmW FWA % Data Volume on 5G (90%)

5G mmW FWA Dropped Connections (1%)

5G mmW FWA Setup Failures (1%)

5G mmW FWA DL Throughput (75%)

5G mmW FWA UL Throughput (75%)

5G C-band FWA % Data Volume on 5G (90%)

5G C-band FWA Dropped Connections (1%)

5G C-band FWA Setup Failures (1%)

5G C-band FWA DL Throughput (75%)

5G C-band FWA UL Throughput (75%)

Best Systems

1. Support Core team activities

a. Timely submit feature requests for upcoming PIs

b. Submit and escalate bug reports and tickets as needed

c. OPT and APT development - continue to engage with HQ and the developers on these tools and the algorithms that drive them (support ASEU forecasting model, KSS, KSP, 5G APT, etc.)

d. Data Integrity – find errors, create audits, work with the submarkets to clean up our tools and golden sources , submit feature requests to fix issues

2. Support SAFE process and prioritize new features

3. Ensure alignment and clear communication with the finance team (especially when we make changes to Primary Rationale, which change the budget codes)

Business Owners - these are the concepts behind what the BO will do

1. Create and maintain a Roadmap that outlines the vision for respective Module

2. Defines Business Objectives for respective Module

- 3. Work closely with SAFe team and provide Priority, with Core Team advisement, on Module Features and Bugs
- 4. Write Documentation that outlines Feature Functionality and expected Use Cases
- 5. Develop Business Processes / Rules: How should the end user use each Module
- 6. Write Test Cases that outline essential functionality and expected behavior that can be converted to automated test cases that can be run prior to production releases to ensure that previous functionality continues to work as expected with new code added
- 7. Responsible for testing of features, including driving Core Team members to complete testing within a timeframe to include Features in a subsequent Production Release
- 8. Run Core Team Call(s)

Key Initiatives to Support Metrics & Business Goals

- Make the best network even better
- Support the business units with customer experience
- Work with business units to drive new product revenue
- Leverage Work Forward – lead hybrid and remote teams for success and find innovative ways of working
- Employee career development, technical development, and training

Network Growth & Coverage: Strengthen and grow network coverage

Deploy additional coverage sites to improve Root State Route performance and improve overall customer experience

- Metric Target
- 5G C-band Sites On Air (10,668)
- 5G mmW Sites On Air (3,500)
- New Macros (1,962)
- New Small cells (1,403)
- SNAP Conversions (non mmW) (8,161)
- 5G C-band POPs Covered (1Q – 200M, EOY - Tracking)
- High Rent Relos (TBD)
