

2025 EOY Accomplishments - Jesus De Leon Melendez

☐ EOY Accomplishments

- Automated the 1T Solution Configuration Analysis
 - I designed, built, and optimized a comprehensive data pipeline that automates the complex 1T solution configuration analysis. This project involved re-engineering the intricate business logic from our Alteryx workflow into a single, robust SQL query.

This solution integrates and cleans data from five different sources:

ce_2026_budget.rfds_eqp (RFDS equipment data)

npp.fuze_projects (Project status)

vision.universe_latest_v2 (Site universe data)

vision.dtwirradiosummarytest (Radio details)

foundry_coverage.fips_bandwidth (Bandwidth data)

- The primary challenge was ensuring both accuracy and performance. The source data had significant quality issues, including data type mismatches on join keys (VARCHAR vs. INT), non-numeric values in numeric columns, and data duplication. Furthermore, the query's complexity initially led to extreme runtimes (1-2 hours) due to inefficient query plans and index-breaking operations.
- I systematically debugged each component, identified all data anomalies, and re-structured the query to use efficient pre-filtering (RLIKE) instead of slow, on-the-fly casting. This approach resolved all data-related errors while allowing the database to use its indexes, reducing the final runtime from nearly two hours to under four minutes.
- The final product is a new table, vision.UC_Automation_1T_Solution_Config, which will be scheduled to refresh automatically on a weekly basis. This automation:
 - Saves Time: It transforms a multi-hour, manual analysis process into a fast, automated query.
 - Increases Reliability: It creates a single, queryable source of truth, eliminating the risk of manual data errors from tools like Knime, Alteryx or Tableau. It also allows anyone with SQL knowledge to update routines and definitions if required.
 - Enables Future Analysis: The final table is pivoted into a simple, flag-based format (e.g., LB-HP = 1), making it simple and fast for the

team to consume this data for unit cost modeling, planning, and other reports.

- I developed a strategic alignment dashboard that provides comprehensive comparison of the Vision, CE, and POR project portfolios. This analysis moves beyond simple project counts to measure the *quality* and *strategic value* of our execution.
 - Identified Critical Inefficiencies: The dashboard uncovered a systemic, costly pattern where high-value, high-score 'Vision' projects are being ignored and replaced by a large volume of low-value, unplanned 'POR-only' work.
 - Aligned with CEO Mandate: This work directly supports the new CEO's focus on "smart use of money" and "efficiency" by pinpointing exactly *where* and *why* our spending is misaligned with our strategy.
 - Provided Actionable, Regional Insights: I built drill-downs that identified which regions are the worst offenders in this misalignment (e.g., NY Metro) and which are our 'best-in-class' performers (e.g., Great Plains). This gives leadership a clear, data-driven path for targeted intervention.
 - Continued support for Waypoints RAN products focusing on the Pipeline Review dashboard.
 - I spearheaded a project to provide critical, new visibility into our project pipeline's health. The business could see the *size* of the pipeline but had no way to track its *flow* or *dynamics*.
 - I engineered an end-to-end analytics solution, starting with a complex query to capture monthly project snapshots. I then developed the logic to classify every change, such as **newly added projects, completions, or cancellations**.
 - The resulting sheet in the dashboard visualizes these month-over-month trends, allowing leadership to finally track the *true* inflow and outflow of projects and make more informed decisions."
 - In addition to the flagship 'Month-over-Month' analysis, I delivered a series of other critical enhancements to the pipeline review dashboard. These features, often delivered in parallel, were crucial for improving data accuracy, aligning with strategic company goals, and delivering a more flexible user experience for leadership.
 - **Drove Strategic Alignment & Reporting Accuracy:** Implemented new logic to tag specific **FD-MIMO Macro Mods** as 'Directionally Aligned' and 'Strategic,' creating a new 'FD-MIMO MODs' subcategory to give this company objective high-level visibility.
- Ensured reporting precision by refining the 'SC New Build' logic to correctly capture '**oDAS-SC Conversions**' and by filtering out irrelevant **non-RF modifications** to reduce data noise.

- **Integrated New, High-Value Data for Planning:** Integrated the '**Vision Universal Score**' (the KSS replacement), providing a critical new metric for regions to rank and prioritize solutions in alignment with new planning and budgeting processes. Added the '**Master Project Name**' field to enable the identification and tracking of key contractual obligations.

- **Delivered Key Usability Upgrades:** Acted on direct leadership feedback (from Chris Tallafiero and others) to convert the '**Project Status**' filter to **multi-select**. This small change unlocked significant analytical value, allowing users to compare multiple statuses (like 'Active' and 'Pending') simultaneously for the first time.

2025 Midyear Accomplishments - Jesus De Leon Melendez

☐ NCM/VISION Accomplishments -

- My recent contributions have focused on enhancing data integrity, driving operational efficiency through automation, and providing critical strategic insights to improve decision-making across key network initiatives.
- Enhanced Data Integrity for Strategic Initiative: Proactively led data validation efforts for the Universe initiative qualification, identifying critical discrepancies within the Sub1 solution universe creation. Reduce potential rework by catching qualification issues upstream.
- Optimized Data Integration for Unit Cost. Led significant improvements to the Unit Cost Alteryx workflow, reducing reliance on static data files by integrating direct database sources such as Digital Twin information. Enhanced the accuracy and timeliness of data for radio capabilities, site qualification, and service/equipment costs for 1T and New Build solutions, directly supporting unit cost performance.
-
- Spearheaded Critical Dashboard Development for Strategic Transition with Accenture:
 - Served as the primary technical point of contact for core dashboard development during the Accenture Waypoint phase-out, ensuring continuity and enhancement of key reporting capabilities.
 - Successfully delivered 26 new features and enhancements across backend data logic and frontend visualizations, significantly improving data accessibility and insights for critical operational areas, including the RAN Pipeline for Market Review dashboard.

- During Sprint 3 of development after handover from the Accenture team I successfully completed 8 additional feature enhancements adding month over month tracking of project progression and project spend values from 1ERP data.
- Championed Solution Prioritization: Championed the development and implementation of a critical solution capacity flagging and identification mechanism on the Waypoint Pipeline dashboard. Enabled more strategic solution prioritization by integrating Persistence Priority and BSS metrics, providing clear visibility into solutions addressing capacity.
- Ensured Data Accuracy & Reliability Across Critical Reporting Deliverables: Executed comprehensive data validation and quality assurance for all feature requests related to the Accenture Waypoint phase-out, rigorously testing for inconsistencies, data integrity, and accurate feature results.
