Jesus M. De Leon

Analytics Engineer | SQL · Python · dbt · Tableau · BigQuery | Open
to Analytics & BI Leadership Roles
New York City Metropolitan Area

Summary

I'm a data engineer with 17+ years of progressive technical experience — starting in RF network infrastructure, moving into capital portfolio analytics, and spending the last several years building production data pipelines for a \$4B+ national program at Verizon. What makes my background unusual: I've been close to both the infrastructure that generates data and the executive decisions that consume it. That combination — operational context plus analytical depth — is what I bring to data engineering roles. My current focus is analytics engineering: designing end-to-end pipelines (Python → BigQuery → dbt → Tableau), automating data quality validation, and building executive dashboards that drive capital allocation decisions. I recently reduced a critical analysis pipeline from 2 hours to under 4 minutes by re-engineering Alteryx business logic into optimized SQL — the kind of problem I actively look for. I'm building a public portfolio of analytics engineering projects spanning transit equity (MTA, 88M+ rows), Puerto Rico real estate, and financial controls (SEC EDGAR anomaly detection). Everything on my GitHub is production-grade — medallion architecture, CI/CD, dbt testing, documented methodology. Open to: Analytics Engineer, BI Engineer, Senior Data Analyst, and Analytics Manager roles in NJ/NYC, particularly in pharma, financial services, or tech. Available immediately. Experience

Verizon

11 years 9 months

Senior Engineer Consultant - Data Science

September 2024 - February 2026 (1 year 6 months)

Basking Ridge, NJ

Data Pipeline Automation: Engineered a robust data pipeline to automate 1T solution configuration analysis. Re-engineered complex business logic from Alteryx into a single SQL query, reducing analysis runtime from 2 hours to under 4 minutes.

- Strategic Dashboarding: Developed the "Strategic Alignment Dashboard" to compare long-term "Vision" strategy against actual project execution (POR), identifying critical inefficiencies where high-value projects were being displaced by unplanned work.
- Pipeline Analytics: Spearheaded the "Pipeline Review" dashboard logic to track the true inflow/outflow of projects month-over-month, providing leadership with previously unavailable visibility into pipeline dynamics.
- Technical Transition Lead: Served as the primary technical point of contact during the Accenture Waypoint phase-out, successfully delivering 26+ new features and enhancements to ensure continuity of critical reporting capabilities.

Senior Engineer Consultant - Radio Frequency (Network Strategy)
November 2017 - September 2024 (6 years 11 months)

Basking Ridge, NJ

- HQ Liaison & Strategic Alignment: acted as the primary conduit ("One Voice") between Headquarters and Regional Engineering teams. Translated complex national directives—including C-Band strategy, Budgeting, and 3-Year Planning—into actionable regional build plans. Led weekly alignment sessions and "Roadshows" to ensure regional Project of Record (POR) execution matched corporate vision, minimizing emergency communications and conflicting messaging
- Tool Development: Developed the "Program Labels" dashboard to automate sector capacity logic, simplifying the labeling process for the entire traffic team,.
- Cost Transformation: Managed the High Rent Relocation (HRR) initiative, creating 5,600+ solutions to drive significant rent reductions.
- Algorithm Design: Collaborated on the development of the Kraken Revenue Weight (KRW) formula and 5G Kraken Service Probability (KSP) logic to ensure accurate financial metrics for network planning.
- Data Integrity: Led the Data Integrity team. Resolved 80% of historical RFDS/ NPP data mismatches across national capital planning systems, establishing validated single source of truth for executive reporting while ensuring "Best Network" data quality.

RF Design Engineer III

June 2014 - November 2017 (3 years 6 months)

Greater New York City Area

- Market Performance: Managed RF performance for Bronx County, maintaining VoLTE In-Effective Attempt (IA) rates below 0.55% and winning 22 of 25 zip codes in throughput benchmarks.
- Large Scale Deployment: Successfully activated a record-setting 745 oDAS nodes in a single year to improve capacity,.
- Cost Efficiency: Implemented Small Cell Search Rings (SARs) to lower rent expenses while maintaining network flexibility

Ericsson

4 years

RF Consultant

February 2010 - December 2013 (3 years 11 months)

RF Consultant for America Mobile PR (CLARO)

Implementation Manager

2009 - 2010 (1 year)

Open Mobile PR

RF Engineer

2006 - 2009 (3 years)

Education

Universidad Politécnica de Puerto Rico

Master of Business Administration (M.B.A.), Business Administration and Management, General · (2011 - 2014)

UPR Mayaguez

BSEE, Engineering · (2002 - 2005)

UPR Mayaguez

Pre-Med · (1997 - 2001)
